

Incident Safety Officer Checklist

- Evaluate the hazards associated with the designation of a landing zone and interface with helicopters
- Ensure that those providing medical care to patients are taking proper infectious control procedures
- Ensure that a decontamination zone is provided if indicated
- Monitor firefighters for signs of physical / psychological stress
- Ensure that the Incident Commander establishes incident scene rehabilitation
- Upon notification of a member injury, illness, or exposure, immediately communicate this to the Incident Commander and ensure that an emergency medical card is provided
- For long-term operations, ensure that food, hygiene facilities, and any other special needs are provided for members
- Ensure that incident stress management is established as needed
- Initiate accident investigation if indicated
- Prepare a written report of the post-incident analysis that includes pertinent information about the incident relating to health and safety issues.
- Participate in post-incident analysis

NOTE: There is no possible way to list all of the potential hazards at emergency incidents. This checklist includes some of the common potential hazards and should not be mistaken for a complete list. The Incident Safety Officer must be trained and qualified to recognize other potential hazards and utilize good judgement and common sense.

(NOTE: use wet erase pen or grease pencil only)

Waiver: "This board is a tool designed to assist the Incident Commander or other members in managing small or large scale incidents or training evolutions. Those in management roles should comply with NFPA 471, 472, 473, 1006, 1021, 1561, and any other relevant codes and standards. IMS Alliance is not responsible for the training, application, or use of this tool."
